

The investments made by the Strait of Canso Superport Corporation are attracting a lot of attention for the Town of Mulgrave, both locally and internationally. This attention bodes well for local employment opportunities both now and in the future.

In the coming weeks these turbine blades will be moved off the Terminal and on to their ultimate destination. As they are transported from the Mulgrave Marine Terminal along route 344 to highway 104, there will be relatively short periods of time where appropriate traffic control measures will be in place to facilitate the safe and orderly movement of these wind turbine components.

We apologize in advance for any inconvenience this may cause.
